Algorithm PA2
Report
B09901062 黃宥翔

● Data structure used

2d array using pointer to store max

Two Vectors to stored data pair

1d array to store end-to-end relation

● Lessons learned

I learned the concept of stack size.

Initially, I exceeded the stack size limit, and the segmentation fault error popped up.

I found this by setting stack size limit to 10000 with ulimit command.

So afterward, I cut down some conditioning and the program worked just fine.
